

Checking the OpenLCB (Sample) Protocol

The OpenLCB Group

February 20, 2024

1 Introduction

This note documents the procedure for checking an OpenLCB implementation against the (Standard name here) Standard.

The checks are traceable to specific sections of the Standard.

The checking assumes that the Device Being Checked (DBC) is being exercised by other nodes on the message network, e.g. is responding to enquiries from other parts of the message network.

2 (specific content) Procedure

Select “(something) checking” in the checker program, then select each section below in turn. Follow the prompts for when to reset/restart the node and when to check outputs against the node documentation.
